DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT

Small installations up to 100 A single phase supply

Issued in accordance with BS 7671: 2018 – Requirements for Electrical Installations

DPM18C

PART 1 : DETAILS OF THE CONTRACTOR, CLIENT AND INSTAL	LATION										
DETAILS OF THE CONTRACTOR Trading Title: Flex Electrical Services Address: 43 The Crescent, Blidworth, Mansfield	DETAILS OF THE CLIENT Contractor Reference Number (CRN): Name: Name: Address: 90 Paget Street, Loughborough, Leicestershire	DETAILS OF THE INSTALLATION Tenants Occupier: Address: 18 Chestnut Street, Loughborough, Leicestershire									
Postcode: NG21 0SE Tel No: 07773888063	Postcode: LE11 5DT Tel No: N/A	Postcode: LE11 3BE Tel No: N/A									
PART 2 : PURPOSE OF THE REPORT											
Purpose for which this report is required: Previous periodic report due to e	expire										
Date(s) when inspection and testing was carried out: (^{08/07/2022}) Records available: (ort available: (
PART 3 : SUMMARY OF THE CONDITION OF THE INSTALLATIO	N										
General condition of the installation (in terms of electrical safety): Installation is wired under the 16th edition wiring regulations and in go protection circuits 3/4/5/6.	ood condition, consumer unit is 16th edition plastic with a single RCD	0, some circuits have RCBOs fitted circuits1/2. some circuits have no RCD									
Estimated age of electrical installation: () years Evidence o	of additions or alterations: () Overall assessment of the	e installation is: Satisfactory, UASANSKACKory* (delete as appropriate)									
PART 4 : DECLARATION											
INSPECTION AND TESTING											
	ng the observations (page 2) and the attached schedules, provides an accurat	reasonable skill and care when carrying out the inspection and testing of the e assessment of the condition of the electrical installation taking into account the Date: 08/07/2022									
REVIEWED BY											
Name (capitals): PETER WILSON	Signature:	Date: 08/07/2022									
*An unsatisfactory assessment indicates that dangerous (CODE C1) and/or potentially dar		ion (CODE FI) without delay is required.									

This report is based on the model forms shown in Appendix 6 of *BS 7671* Published by Certsure LLP @ Copyright Certsure LLP (July 2018) Warwick House, Houghton Hall Park, Houghton Regis, Dunstable, LU5 5ZX

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT

Small installations up to 100 A single phase supply

Issued in accordance with BS 7671: 2018 – Requirements for Electrical Installations

DPM18C

PART 5 : NEXT INSPECTION	
I/We (as indicated on page 1) recommend that subject to the necessary remedial work being taken, this installation should be further inspected and tested after an interval of not more than 5	years/ XiXiXiX s* (delete as appropriate)
PART 6 : OBSERVATIONS AND RECOMMENDATIONS FOR ACTIONS TO BE TAKEN	
CODES: One of the following Codes, as appropriate, has been allocated to each of the observations made below to indicate to the person(s) responsible for the electrical installation the degree of urgency for remedial action CODE C1 'Danger Present' CODE C2 'Potentially Dangerous' CODE C3 'Improvement Recommended'	CODE FI 'Further Investigation Required'
Referring to the Schedule of Items Inspected (see PART 10), the attached Schedule of Circuit Details and Test Results (see PART 12), and subject to any agreed limitations listed in PART 7: There are no items adversely affecting electrical safety (), OR The following observations and recommendations for action are made:	
Item No Observation(s) 1 4.4 16th edition consumer unit made from combustable material () ()	Code Location Reference (C3 front bedroom
(2) (4.17Some circuits have no RCD protection, circuits 3/4/5/6	$(\frac{C3}{C3})$ ()
4 Circuit 2 continuity reading slightly low on r2 (earth) 0.78 ohms should be 0.86 ohms	(<u>C3</u> (<u>C3</u> (<u>C3</u> (<u>Kitchen sockets</u>)
(5) (Circuit 9 only one lighting circuit suppling all 3 x floors and smoke alarms	(<u>C3</u>) ()
() ()	() ()

	() ()
() () ()	() () () ()
() () ()	() ()
() ()	() ()
() () Additional pages? (<u>None</u>) State page numbers: (<u>N/A</u>)	() ()
Immediate action required for items: (N/A) Improvement recommended for items: (1,2,3,4,5)
Urgent remedial action required for items: (N/A)

*The proposed date for the next inspection should take into consideration any legislative or licensing requirements and the frequency and quality of maintenance that the installation can reasonably be expected to receive during its intended life. The period should be agreed between relevant parties.

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT

Small installations up to 100 A single phase supply

Issued in accordance with BS 7671: 2018 – Requirements for Electrical Installations

DPM18C

PART 7 : DETAILS AND LIMITATIONS ON THE INSPECTION AND TESTING														
The inspection and testing has been carried out in accordance with BS 7671: 2018, as amended. Cables concealed within trunking and conduits, or cables and conduits concealed under floors, in inaccessible roof spaces and the building or underground, have not been visually inspected unless specifically agreed between the Client and the Inspector prior to inspection. Details of the installation covered by this report. Inspection and testing of consumer unit and all final circuits, visual inspection of distributors equipment only.														
Agreed limitations including the reasons, if any, on the inspection and testing. No taking up of floors, or dismantling of fitted units or appliances.														
Extent of sampling (inspection only): Sampling Operational limitations including the reasons: N

NOTES FOR RECIPIENT

THIS CONDITION REPORT IS AN IMPORTANT AND VALUABLE DOCUMENT WHICH SHOULD BE RETAINED FOR FUTURE USE

The purpose of a domestic periodic inspection is to determine, so far as is reasonably practicable, whether the electrical installation of a single dwelling (house or flat) is in a satisfactory condition for continued service. This report provides an assessment of the condition of the electrical installation identified overleaf at the time it was inspected and tested, taking into account the stated extent of the installation and the limitations of the inspection and testing.

The report identifies any damage, deterioration, defects and/or conditions found by the inspector which may give rise to danger (see PART 6), together with any items for which improvement is recommended.

If you were the person ordering this report, but not the user of the installation, you should pass this report, or a full copy of it including these notes, the schedules and additional pages (if any), immediately to the user.

This report should be retained in a safe place and shown to any person inspecting or undertaking further work on the electrical installation in the future. If you later vacate the property, this report will provide the new user with an assessment of the condition of the electrical installation at the time the periodic inspection was carried out.

Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested every six months. For safety reasons it is important that this instruction is followed.

For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection should be carried out is stated in PART 5 of this report. There should also be a notice at or near the main switchboard or consumer unit indicating when the next inspection of the installation is due.

This report has been issued in accordance with the national standard for the safety of electrical installations, *BS 7671: 2018 – Requirements for Electrical Installations.*

This green Electrical Installation Condition Report is intended for use by NICEIC or ELECSA contractors or installers working outside the scope of their registration and electrical contractors not registered with NICIEC or ELECSA.

This report form is intended to be issued only for the purpose of reporting on the condition of an existing domestic electrical installation and must not be issued to certify new electrical installation work including the replacement of a consumer unit.

The report consists of at least six numbered pages. Additional numbered pages may have been provided to permit further relevant information relating to the installation to be recorded. For installations having more than one consumer unit or more circuits than can be recorded in PART 12, one or more additional *Schedules of Circuit Details and Test Results* should form part of the report. The report is invalid if any of the schedules identified in PART 10 are missing.

You should have received the report marked 'Original' and the contractor should have retained the report marked 'Duplicate.

PART 7 (Details and limitations) should identify fully the extent of the installation covered by this report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the report before the inspection was carried out.

Rarely, an operational limitation may have been encountered during the inspection such as inability to gain access to parts of the installation or to an item of equipment. The inspector should have noted any such limitations in PART 7. It should be noted that the greater the limitations applying to a report, the less its value from the safety aspect.

A declaration should have been given by the inspector in PART 4 of the report. The declaration must reflect the statement given in PART 3, which summarises the observations and recommendations made in PART 6. Where one or more observations have been made in PART 6, the Classification code given to each by the inspector indicates the degree of urgency with which remedial action needs to be taken to restore the installation to a safe working condition.

Where the inspector has indicated an observation as code C1 (danger present) **the safety of those using the installation is at risk**. Wherever practicable, items classified as (C1) should be made safe on discovery, and it is recommended that a skilled person(s) competent in electrical installation work undertakes the necessary remedial work immediately.

Where the inspector has indicated an observation as code C2 (potentially dangerous) **the safety of those using the installation may be at risk**, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

Where the inspector has indicated that an item requires further investigation (FI), the investigation should be carried out without delay to determine whether danger or potential danger exists. For further guidance on the Classification codes, please see the reverse of page 2.

Where the installation can be supplied by more than one source, such as the public supply and a standby generator or microgenerator, this should be identified in PART 8 *Supply Characteristics and Earthing Arrangements*, and the *Schedules of Circuit Details and Test Results* (PART 12) compiled accordingly.

Where inadequacies in the intake equipment have been observed (Item 1 of PART 10), the person ordering the inspection should inform the distributor and/or supplier as appropriate.

Should the person ordering this report have reason to believe that it does not reasonably reflect the condition of the electrical installation reported on, that person should in the first instance raise the specific concerns in writing with the contractor.

GUIDANCE FOR RECIPIENTS ON THE CLASSIFICATION CODES

Only one Classification code should be given for each recorded Observation

Classification code C1 (Danger present)

Where an observation has been given a Classification code C1, the safety of those using the installation is at risk and immediate remedial action is required.

The person ordering the work is advised to take action without delay to remedy the observed deficiency in the installation, or to take other appropriate action (such as switching off and isolating the affected part(s) of the installation) to remove the danger. The contractor issuing this report will be able to provide further advice.

NICEIC and ELECSA makes available 'Electrical Danger Notification' forms to enable inspectors to record, and then to communicate to the person ordering the report, any dangerous condition discovered.

Classification code C2 (Potentially dangerous)

Classification code C2 indicates that, whilst those using the installation may not be at immediate risk. urgent remedial action is required to remove potential danger. The contractor issuing this report will be able to provide further advice.

It is important to note that the recommendation given at PART 5 of this report (Next Inspection) for the maximum interval until the next inspection is conditional upon all items which have been given a Classification code C1 and code C2 being remedied immediately and as a matter of urgency, respectively.

It would not be reasonable for the inspector to indicate that the installation is in a satisfactory condition if any observation in this report has been given a code C1 or code C2 classification.

Classification code C3 (Improvement recommended)

Where an observation has been given a Classification code C3, the inspection and/or testing has revealed a non-compliance with the current safety standard which, whilst not presenting immediate or potential danger, would result in a significant safety improvement if remedied. Careful consideration should be given to the safety benefits of improving these aspects of the installation. The contractor issuing this report will be able to provide further advice.

Code FI (Further investigation required without delay)

It should usually be possible for the inspector to attribute a Classification code to each observation without indicating a need for further investigation.

However, where 'FI' has been entered against an observation the inspector considers that further investigation of that observation is likely to reveal danger or potential danger that, due to the agreed extent or limitations of the inspection and/or testing, could not be fully identified at the time.

It would not be appropriate for the inspector to indicate that the installation is in a satisfactory condition if there is reasonable doubt as to whether danger or potential danger exists. Consequently, where the inspector has indicated 'Further investigation required without delay' (FI) the overall assessment of the installation (PART 3) should be marked as 'Unsatisfactory'.

If the inspector has indicated that an observation requires further investigation without delay, the person ordering this report is advised to arrange for the contractor issuing the report (or another skilled person or persons competent in such work) to undertake further examination of that aspect of the installation as a matter of urgency, to determine whether or not danger or potential danger exists.

Further information

Further information on the application of Classification codes, primarily aimed at inspectors but of possible interest to persons ordering condition reports, can be found in Electrical Safety First's Best Practice Guide No 4 Electrical installation condition reporting: Classification Codes for domestic and similar electrical installations. The guide can be viewed or downloaded free of charge from www. electricalsafetyfirst.org.uk
